ALLSTAR Link Node on Cell Phone – Android Version

DVSwitch Mobile is an Android App available on Play Store. I think there is a similar App for iPhone, however not having an iPhone I don't know if it will handle Node Mode.

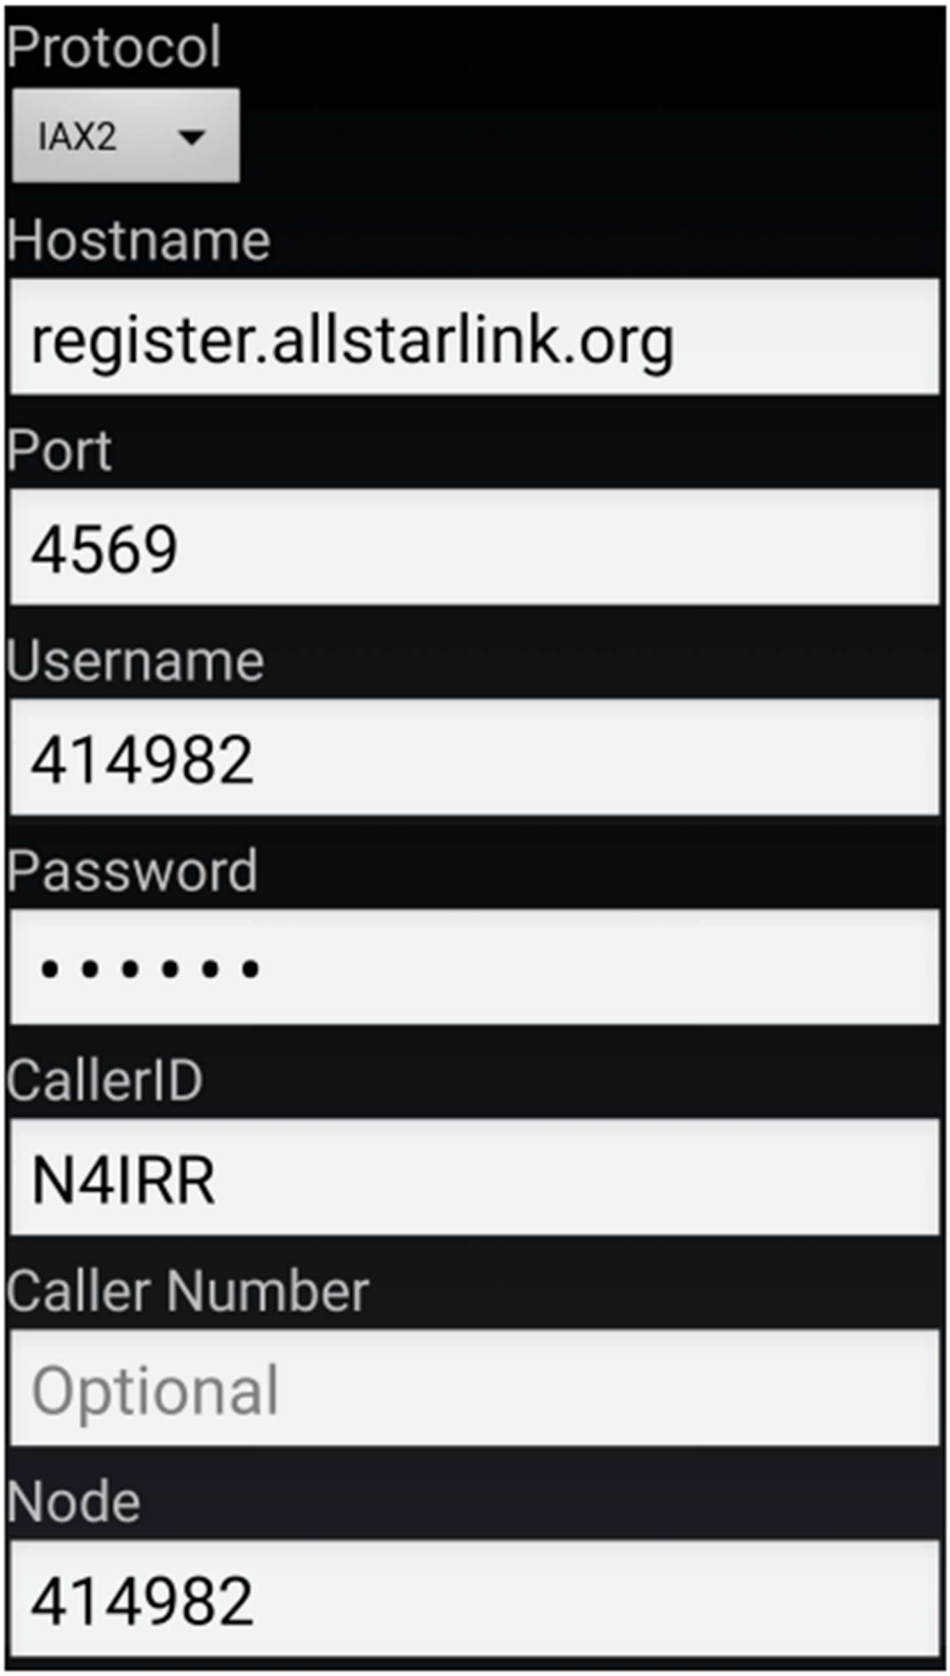

This allows you to use your phone, without any hardware, to access AllStar for a total cost of $2.00.

The trick that took me forever to find is located at https://www.paolettopn.it/listing/DVSM_2.0.0.pdf

The following is extracted from that document:

Node Mode
● With the addition of Node Mode you can become a full fledged node on the network. All you need to do is set up your user account with the proper info and you are good to go!

● What you need
■ A node number and password
● to use "Node mode" you MUST assign DVSM a UNUSED node number that is assigned to YOUR call sign.
● Go to allstarlink.org
● https://wiki.allstarlink.org/wiki/Beginners_Guide
○ https://wiki.allstarlink.org/wiki/Beginners_Guide#Creating_an_account
○ https://wiki.allstarlink.org/wiki/Beginners_Guide#Login_.26_Create_a_Server
○ https://wiki.allstarlink.org/wiki/Beginners_Guide#Request_a_Node_number
■ DVSM account to set up
● Protocol: IAX2
● Hostname: register.allstarlink.org
● Port: 4569
● Username: YOUR_NODE_NUMBER
● Password: YOUR_NODE_PASSWORD
● CallerID: your callsign
● Node: Blank
■ Do not check auto connect
